Development and prospect of vacuum equipment industry in China

Su YUAN*

Fudan University, China

Since the policy of reform and opening up in the 1980s, China's vacuum industry has developed rapidly and made considerable progress. The applications of vacuum products and industries are increasingly widespread, which become an important part of national economy. The vacuum industry has been extended from the size of a dozen enterprises to nearly 600 enterprises now, and the market share has enlarged by 100 times from the beginning hundreds of millions RMB to about 10 billion RMB. Nowadays China has the largest number of vacuum equipment manufacturing enterprises and the largest vacuum application market in the world.

In this talk, I will present the development process of Chinese vacuum industry from weak to strong. The following aspects are mainly introduced: 1. the development process of the Chinese Vacuum Society (CVS); 2. The introduction of Vacuum Equipment Association; 3. The distribution of Chinese vacuum enterprises; 4. The distribution of the products and market condition; 5. The current situation of vacuum industry; 6. The induction of the major manufacturers of vacuum equipment in China; 7. The prospect of vacuum industry, etc.
